RE: T and J Investments WWTF, MO-0124494, Operating Permit Renewal Application

Dear Permittee:

The Missouri Department of Natural Resources' Water Protection Program have become aware that you are now the property owners of the property located at 1339 Prathersville Road. The wastewater lagoon serving this property is permitted under Missouri State Operating Permit MO-0124494. This permit is currently expired. Enclosed is the renewal application form that must be completed to renew the permit and transfer ownership.

Department's regulations require that each application for an operating permit shall identify the person, as that term is defined in Section 644.016(15), RSMo, that is the owner of, operator of, or area-wide management authority for a water contaminant source, point source, wastewater treatment facility, or sewer collection system. This person shall be designated as the continuing authority. The person designated as the continuing authority is responsible for compliance with all permit conditions.

Continuing authorities are listed in preferential order in the regulations, level one (1) through level five (5). A level three (3), four (4), or five (5) applicant may constitute a continuing authority by showing that a level one (1) or two (2) are not available; do not have jurisdiction; are forbidden by state statute or local ordinance from providing service to the person; or that it has met one of the requirements listed in 10 CSR 20-6.010(2)(C)1.-7.

The Boone County Regional Sewer District (BCRSD) and the city of Columbia jointly are the level two (2) continuing authority in Boone County. The city of Columbia notified the Department that the Columbia sewer collection system is available for connection for your facility. If the applicant wants to propose the use of a lower preference continuing authority (*Please provide a valid Continuing Authority with your renewal application*) when the higher

level authority (city of Columbia) is available, the applicant must submit to the Department by June 13, 2022, one (1) of the following for the Department's review:

- A waiver from the city of Columbia;
- A written statement or a demonstration of non-response from the city of Columbia declining the offer to accept management of the additional wastewater;
- All parts of the legal boundary of the property to be connected are beyond two thousand feet (2000') from the collection system operated by the city of Columbia;
- The proposed connection or adoption charge by the city of Columbia would equal or exceed what is economically feasible for the applicant, which may be in the range of one hundred twenty percent (120%) of the applicant's cost for constructing or operating a wastewater treatment system;
- The proposed service fee on the users of the system by the city of Columbia that is above what is affordable for existing homeowners in that area;
- Terms for connection or adoption by the city of Columbia that would require more than two (2) years to achieve full sewer service; or
- A demonstration that the terms for connection or adoption by the city of Columbia are not viable or feasible to homeowners in the area.

When the Department receives the information from the applicant, the Department will then review the availability of the connection.

For permitted facilities where the Department agrees that the connection is available under the terms of the regulation, the permit application will be considered incomplete and the Department will deny the application. In addition, failure to submit a response by the deadline will result in the permit application being considered incomplete and the Department will deny the application.

If you would like information on possible funding options, please contact the Financial Assistance Center at 573-751-1192 or fac@dnr.mo.gov.

Please be aware the Department developed a new in-house Electronic Discharge Monitoring Report (eDMR) system to replace the third-party E2 eDMR system owned and maintained by EnfoTech. The new eDMR system utilizes the Missouri Gateway for Environmental Management (MoGEM) as the main login mechanism. MoGEM utilizes the U.S. Environmental Protection Agency's (EPA) Shared Cross-Media Electronic Reporting Rule (CROMERR) Services portal for registration and identity verification. Current users of eDMR are required to register as a new user through MoGEM before their next Discharge Monitoring Report is due. Paper applications are no longer utilized.

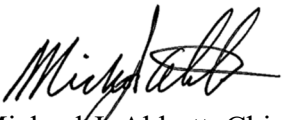

Additional information and links to the eDMR system may be found at: <https://dnr.mo.gov/env/wpp/edmr.htm>. Those with questions and comments may email edmr@dnr.mo.gov or call the eDMR Help Desk at 573-526-2082 or toll free 855-789-3889.

If you have any questions about this letter, the anticipated timing of the process, or would like to discuss the permit application, please feel free to contact Ashley Kneemueller by phone at 573-526-1503, email at ashley.kneemueller@dnr.mo.gov, or by mail at Department of Natural Resources, Water Protection Program, P.O. Box 176, Jefferson City, MO 65102-0176. Thank you.

Sincerely,

WATER PROTECTION PROGRAM

Michael J. Abbott, Chief
Operating Permits Section
